June 2024

Hello Hiring Manager,

I am a mid-level Web Developer specializing in the MERN stack, with hands-on experience building, deploying, and maintaining production-ready web applications. I am currently seeking remote opportunities as a Web Developer or MERN Stack Developer, including freelance collaborations.

I have developed a full-stack ecommerce platform using MongoDB, Express.js, React.js, and Node.js, featuring secure JWT authentication, role-based access, OTP verification, real-time chat with Socket.io, and a complete admin panel built in Vanilla JavaScript. (Live Demo: https://ecommerce-fullstack-mern.onrender.com)

Additionally, I have built a full-stack News Blog CMS with Node.js, Express, and MongoDB, including SEO-friendly content management and admin dashboard features. (Live Demo: https://asim-blog-cms.onrender.com)

I am comfortable working across frontend and backend, designing secure REST APIs and collaborating in remote environments using Git and GitHub, I enjoy working on real-world business logic and scalable systems.

I would welcome the opportunity to contribute my skills to your team and discuss how I can add value to your projects. Thank you for your time and consideration.

Kind regards,

Asim Mir
