Asim Mir

Backend Developer (Node.js / Express / MongoDB)

Backend Developer specializing in Node.js, Express.js, and MongoDB with hands on experience designing and deploying production-ready REST APIs. Strong expertise in authentication & authorization (JWT, RBAC), scalable database architecture, real time systems, and AI-integrated backend workflows. Experienced in building secure multi role systems and complex business logic including ecommerce and intelligent task automation.

Projects

AI Interview Assistant – Backend (Node.js + AI Integration)

Tech: Node.js, Express.js, MongoDB, Mongoose, JWT, Multer, Stripe API, OpenRouter AI / LLM APIs, Firebase OAuth

Designed and developed the **backend architecture** for an **AI-powered interview preparation platform** that analyzes **resumes**, **generates interview questions**, **evaluates answers** using **AI**, and **provides detailed** performance reports.

Resume Processing Pipeline: Implemented **PDF parsing** using **pdf.js** and built an **AI pipeline** that extracts **structured resume** data including **role**, **experience**, **projects**, and **skills**.

AI Question Generation: Integrated **OpenRouter LLM APIs** to **dynamically generate personalized HR and Technical interview questions** based on candidate profile and resume context.

AI Answer Evaluation Engine: Built an evaluation system where submitted answers **are scored by AI across confidence, communication,** and **correctness, returning structured feedback** and **calculated scores.**

Interview Session Management: Designed **MongoDB schemas for users, interviews, and questions,** enabling **full interview lifecycle tracking** including **status, scoring, and question-level feedback.**

Secure Authentication System: Implemented JWT-based authentication with **HTTP only cookies and protected routes** using **custom middleware.**

File Upload Handling: Integrated **Multer middleware** for **secure resume uploads** with validation and **temporary file processing.**

Credit-Based Usage System: Developed a **credit management system** where users consume **credits to generate AI interview questions.**

Payment Integration: Integrated **Stripe** Checkout **API to allow users to purchase credits securely, with backend verification of successful transactions before** updating user credits.

RESTful API Architecture: Built scalable **and modular Express REST APIs** with **controllers, middleware,** and **service layers following clean backend architecture practices.**

Deployment & Environment Handling: Configured production deployment on Render with environment variables, API security, and **database connection management.**

Ecommerce Backend System (MERN – Backend Focus)

Tech: Node.js, Express.js, MongoDB, React.js, JWT, Socket.io, Nodemailer

Designed and developed a **complete ecommerce backend** using **Node.js and Express**

Built scalable **REST APIs** for users, **products**, **categories**, **orders**, **reviews**, and **sellers**

Implemented **secure authentication** with **JWT**, **bcrypt password hashing**, OTP verification, and **role-based access control (Admin / Seller)**

Developed **multi-seller order management system** with full order lifecycle **(Pending → Shipped → Delivered)**

Implemented **bulk product upload** via **XLSX** with **validation** and **security checks**

Deployed application in a **production environment** and resolved **real world deployment and API integration issues**.

Built **real time admin-seller chat system using Socket.io**

Integrated **automated email notification**s using **Nodemailer**

Designed **MongoDB schemas** for **10+ collections** following **real world business logic**

Deployed **backend** on **production environment** and **managed environment variables securely**

Expertise

- **Languages**: Javascript (ES6+)/TypeScript
- **Backend**: Node.js, Express.js, REST APIs
- **Database**: MongoDB, Mongoose
- **Authentication & Security** : JWT, bcrypt, OTP Verification, OAuth, RBAC (Role based access control)
- **Real Time & integeration**: Socket.io, WebSockets, Nodemailer
- **Tools & Libraries: Git, GitHub,** Tabulator.js, Multer, Nodemailer
- **Architecture:** MVC Pattern, Modular API Design
- **Tools: Git, GitHub, Multer, Tabulator.js**
- **Deployment: Render, MongoDB Atlas, Environment Configuration**

Education

2023 - 2025

ICS

Relevant Skills: JavaScript,TypeScript Node.js, Express.js, MongoDB, React.js, Next.JS

Note: Live demo hosted on free plan initial load may take a few seconds.

AI-Powered Meeting Action Items Tracker

Tech: Node.js, Express.js, MongoDB, Google Gemini API

Integrated **Google Gemini API** for **automated transcript analysis** and **task extraction**

Designed **backend workflow** for **transcript processing, AI response normalization**, and **structured task mapping**

Implemented **task-to-transcript relational linking** with **schema validation**

Built full **CRUD APIs** for **transcripts and AI-generated tasks**

Developed **system health monitoring endpoints** for **Server, Database,** and **AI connectivity**

Handled **AI error management, response validation,** and **production-level reliability**

News Blog CMS – Full Stack Application

Tech: Node.js, Express.js, MongoDB, JWT, EJS

Developed a **complete backend CMS** with **modular** and **scalable architecture**

Implemented **JWT based authentication** with **role based access (Admin / Author)**

Built **admin APIs** for **managing users**, **categories**, **articles**, **comments**, and **settings**

Implemented **image uploads**, **validation**, and **secure data handling**

Designed **comment moderation** workflow and **SEO friendly content structure**

Implemented **pagination**, **search functionality**, and **optimized database queries**
